Models of both families and the reference models, by AIC
Standard (resistance)
SAMC
Reference model
sgr_dk_rav (inverse monomolecular, shape 72, symmetric) + flow -0.222/km (upstream easier)
w = 1.00
dor_pc_pva (inverse Ricker, shape 13)
sgr_dk_rav (reverse-inverse monomolecular, shape 47) + ele_mt_cav (reverse-inverse monomolecular, shape 24) + dor_pc_pva (inverse Ricker, shape 8)
SAMC flow alone (-0.151/km)
run_mm_cyr (inverse Ricker, shape 21) + sgr_dk_rav (Ricker, shape 63) + ele_mt_cav (inverse monomolecular, shape 25)
sgr_dk_rav (linear, directional: towards higher values harder) + flow -0.178/km (upstream easier)
dor_pc_pva (reverse-inverse monomolecular, shape 85, directional: towards higher values harder) + flow -0.156/km (upstream easier)
sgr_dk_rav (reverse-inverse Ricker, shape 35)
dor_pc_pva (reverse-inverse Ricker, shape 77, symmetric)
distance only (km; standard model)
SAMC distance alone
population effects only (null)
ΔAIC = 2
